

Threaded thermocouple

Miniature design

Model TC10-D

WIKA data sheet TE 65.04

for further approvals
see page 2

Applications

- Machine building, plant and vessel construction
- Propulsion technology
- Air-conditioning and refrigeration systems

Special features

- Sensor ranges from -40 ... +600 °C (-40 ... +1,112 °F)
- Compact design
- Universal application
- Direct installation into the process
- Explosion-protected versions

Fig. left: Model TC10-D with process connection compression fitting

Fig. right: Model TC10-D with process connection double threaded hex bushing

Description

Thermocouples of this series are used for the measurement of liquid and gaseous media at low and medium pressures.

The thermocouple is screwed directly into the process. The electrical connection is made via connection terminals in the connection head (splash-proof). The measuring inserts are available in two variants, depending upon the application. The choice is between a replaceable, spring-loaded miniature measuring insert and a non-replaceable, permanently screwed-in design.

Insertion length, process connection and sensor can each be selected for the respective application.

Explosion protection (option)

The permissible power P_{max} as well as the permissible ambient temperature for the respective category can be seen on the EC-type examination certificate, the Ex certificate or in the operating instructions.

Approvals (explosion protection, further approvals)

Instruments marked with "ia" may also be used in areas only requiring instruments marked with "ib" or "ic".
If an instrument with "ia" marking has been used in an area with requirements in accordance with "ib" or "ic", it can no longer be operated in areas with requirements in accordance with "ia" afterwards.

Approvals and certificates, see website

MAKGIL VIET NAM

Sensor

Thermocouple per IEC 60584-1 or ASTM E230

Types K, J, E, N, T (single or dual thermocouple)

Sensor types

Type	Operating temperatures of the thermocouple			
	IEC 60584-1		ASTM E230	
	Class 2	Class 1	Standard	Special
K	-40 ... +1,200 °C	-40 ... +1,000 °C	0 ... 1,260 °C	
J	-40 ... +750 °C	-40 ... +750 °C	0 ... 760 °C	
E	-40 ... +900 °C	-40 ... +800 °C	0 ... 870 °C	
N	-40 ... +1,200 °C	-40 ... +1,000 °C	0 ... 1,260 °C	
T	-40 ... +350 °C		0 ... 370 °C	

The table shows the temperature ranges listed in the respective standards, in which the tolerance values (class accuracies) are valid.

The actual operating temperature of the thermometer is limited both by the maximum permissible operating temperature and the diameter of the thermocouple and the sheathed cable, as well as by the maximum permissible working temperature of the thermowell material.

Listed models are available both as single or dual thermocouples. The thermocouple will be delivered with an ungrounded measuring point, unless explicitly specified otherwise.

For detailed specifications for thermocouples, see IEC 60584-1 or ASTM E230 and Technical information IN 00.23 at www.wika.com.

Tolerance value

For the tolerance value of thermocouples, a cold junction temperature of 0 °C has been taken as the basis.

Electrical connection

Single thermocouple

The colour coding at the positive poles of the instrument decides the correlation of polarity and terminal.

Dual thermocouple

3166822.03

For the electrical connections of built-in temperature transmitters see the corresponding data sheets or operating instructions.

Connection head

Ingress protection

to IP65 per IEC/EN 60529 under the following conditions:

- Use of a suitable cable gland
- Use of a cable cross-section appropriate for the gland or select the appropriate cable gland for the available cable
- Adhere to the tightening torques for all threaded connections

Transmitter (option)

Within the model JS connection head, a model T91.20 analogue temperature transmitter can be factory-fitted. It is mounted in place of the terminal block.

The version with temperature transmitter is not suitable for use in hazardous areas.

For further specifications on the model T91.20 temperature transmitter please refer to WIKA data sheet TE 91.01.

	¼ NPT						
	½ NPT						

1) only Ø = 6 mm

2) Maximum temperature at process connection: 150 °C

Compression fitting

Ferrules from stainless steel are only adjustable once; once the fitting has been loosened, sliding along the thermowell is no longer possible.

Ferrules from PTFE can be adjusted numerous times; once the fitting has been loosened it can again be tightened onto the thermowell.

Max. temperature at process connection: 150 °C

On delivery, the compression fittings are only tightened hand-tight. Insertion length A and neck length N (M_H) can thus be checked. The final positioning/fixing of the compression fitting is carried out at the installation location.

Neck length N (M_H)

The neck length depends on the intended use. Usually an isolation is bridged by the neck tube. Also, in many cases, the neck tube serves as a cooling extension between the connection head and the medium, also to protect any built-in transmitters from high medium temperatures.

Measuring insert

Specifications		
	Removable design	Fixed design
Description	The measuring insert is spring-mounted with two screws into the connection head and can simply be removed from the thermowell for calibration purposes. The thermowell itself can thus remain in the process. The terminal block for electrical connection is connected to the probe tube of the measuring insert.	There is no removable measuring insert in this version. Instead, the sensor element is mounted directly in the thermowell tip. The terminal base for the electrical connection is permanently screwed into the connection head.
Diameter (for thermowell Ø = 6 mm)	3 mm	-
Diameter (for thermowell Ø = 8 mm)	6 mm	-
Operating temperatures (dependent upon the sensor design type and the accuracy class)	Min: -40 °C Max: +600 °C	Min: -40 °C Max: +250 °C
Built-in measuring insert model	TC10-A	-

Operating conditions

Ambient and storage temperature

-40 ... +80 °C

Other ambient and storage temperatures on request

Certificates (option)

Certification type	Measurement accuracy	Material certificate
2.2 test report	x	x
3.1 inspection certificate	x	x
DKD/DAkkS calibration certificate	x	-

The different certifications can be combined with each other.
